DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the memory device must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the

Art Unit: 2835

unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-42 provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-46 of copending Application No. 10/903,185. Although the conflicting claims are not identical, they are not patentably distinct from each other because it would be obvious to include the details such as specific cross-sections of the pins.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Art Unit: 2835

5. Claims 1-42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kenny et al. in view of Cannell et al.

Kenny discloses an apparatus comprising: a substrate 302, and a plurality of micro-pins 303, thermally coupled to the substrate (see Fig. 10A through Fig. 10E), the plurality of micro-pins; the plurality of micro-pins formed from the substrate; the substrate comprises an integrated circuit (IC) die 99 or integrated with microprocessor, Page 12, [0102]; the plurality of micro-pins coupled to an interface layer 301, the interface layer thermally coupled to the substrate 302; the interface layer comprises a solderable layer, Page 16, [0130]; the layer formed from at least one of copper (Cu), gold (Au), nickel (Ni), aluminum (AI), titanium (Ti), tantalum (Ta), silver (Ag), and Platinum (Pt); the plurality of micro-pins substantially enclosed in a device, the device having a cover disposed over the plurality of micro-pins and comprises an inlet and an outlet; further comprising a pump 32, the pump having an outlet, the outlet material transferably coupled to the inlet of the device; each of the plurality of micro-pins comprises a micro-pin having a primitive geometric shape or a complex geometric shape; the plurality of micro-pins arranged to facilitate flow of material across the plurality of micro-pins. With respect to claims 40-42, Kenny discloses the substrate having sidewalls and micropins coupled to the cover when the cover is disposed over of the substrate.

Kenny discloses the claimed invention as shown above, except the micropins arranged in the pixel-like pattern. Cannell discloses the cooling device having pins

Art Unit: 2835

arranged in the pixel-like pattern so the passing fluid fow travels in at least two directions or nonstraight or tortuous path.

Kenny discloses the claimed invention except memory device coupled to the wiring board. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to use the disclosed structure for the system that includes the memory device such as flash memory, since the memory device attached to the wiring board is commonly used arrangement in the industry and also it has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. *Ex parte Masham*, 2 USPQ2d 1647 (1987).

Kenny discloses the claimed invention except diamond film layer interface (claim 5). It would have been obvious to one having ordinary skill in the art at the time the invention was made to have diamond film for thermal interface as the material having good thermal conductivity and being widely used in the industry, and it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. *In re Leshin*, 125 USPQ 416.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Boris L. Chervinsky whose telephone number is 571-272-2039. The examiner can normally be reached on 8-5.

Art Unit: 2835

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lynn D. Feild can be reached on 571-272-2800 ext. 35. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
